Subject index

Adducts
– for aluminum gallium arsenide 515
Aluminum 503
– arsenide 344
– gallium arsenide 283, 299, 384, 399, 515, 521, 527, 564
– gallium nitride 455
– indium nitride 462
– nitride 503
– organic 503, 515, 521
Apparatus
– for thin film growth
– – by liquid phase epitaxy
– – – of gallium indium phosphide 287
– – by vapor phase epitaxy
– – – through chemical vapor deposition
– – – – of silicon carbide 37
– – – through metalorganic chemical vapor deposition
– – – – of lead titanate 624
– for vapor growth
– – by chemical transport
– – – of zinc selenide, substituted with transition metals 75
– for miscellaneous purposes
– – in situ gravimetric and optical methods in atomic layer epitaxy 467
– – X-ray analysis of metalorganic vapor phase epitaxy 104
Arsenic
– organic 521

Bismuth
– strontium calcium cuprate 659

Cadmium
– mercury telluride 610
– sulphide 59, 408
– sulphoselenide 414
– telluride 65, 92, 98, 125, 130, 136, 142, 256, 433
Calcium
– organic 599
– sulphide 599
Characterization
– by atomic force microscopy
– – of organic molecules 641, 645
– by detector spectra
– – of cadmium telluride 125
– by gamma-ray diffraction
– – of mercury(II) iodide 112
– by in situ monitoring of carbon doping
– – of gallium arsenide 394
– by in situ scanning electron microscopy
– – of molecular beam process 334
– by reflection high energy electron diffraction
– – of molecular beam epitaxy process 344, 349, 422
– by reflection supported pyrometric interferometry
– – of silicon–germanium 119
– by stress birefringence
– – of cadmium telluride 130
– by X-ray crystal truncation rod scattering
– – of indium pnectides 148
Computer simulation
– of compensation mechanism in cadmium telluride 142
– of growing steps 164
– of metalorganic chemical vapor deposition processes 202, 209
– of silicon carbide growth 214
Copper
– indium diselenide 233
– indium ditelluride 251
– phthalocyanine 641

Device characterization
– diodes 80, 455
– electronic materials 59, 92, 119, 125, 271, 444, 538
– heterojunction 80, 119, 153, 159, 287, 368, 384, 408, 418, 433, 439, 455, 533, 538
– lasers 159
– photoemitters 310
– quantum wells 159, 183, 379, 418, 422, 538
– radiation detectors 15
– solar cells 233, 256, 299, 305
Diffusional control
– of indium and tellurium across interface 433
– of mercury(II) iodide 9
Diodes, see Device characterization

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– back, regrowth 299
– chemical 136, 293, 404, 527

Fullerene (C_{60}) 227

Gallium
- antimonide 87, 319, 349, 495
- arsenide 177, 183, 239, 246, 305, 326, 334, 344, 354, 359, 379, 389, 394, 467, 482, 521, 527, 564
- indium arsenide 489
- indium arsenide phosphide 287, 310
- indium nitride 455
- indium phosphide 558
- nitride 455
- organic 515, 521
- phosphide 554
- selenide 439

Gold 266

Heterojunction, see Device characterization

Indium
- arsenide 148, 363, 368, 374, 495
- gallium aluminum arsenide 159
- gallium arsenide 153, 533
- gallium arsenide phosphide 310
- nitride 262
- organic 511, 544
- phosphide 148, 171, 314, 475, 511, 533, 544, 549
- selenide 439

Iron
- disilicide 444
- disulphide 271, 630

Kinetics
- of growth 1, 9, 49, 119, 171, 177, 220, 227, 283, 326, 334, 344, 349, 363, 374, 482, 580, 599
- of interface control 379, 422, 527
- of lattice relaxation 489
- of nucleation 220, 326, 334, 344
- of selective area growth 475

Lasers, see Device characterization

Lead
- organic 624
- telluride 449
- tin telluride 69
- titanate 624

Melt growth technique
- by Czochralski method
- - of gallium antimonide 87

Mercury
- cadmium telluride 610, 619
- (II) iodide 1, 9, 15, 23, 112
- manganese telluride 604
- zinc selenide 427

Microgravity, growth under
- of cadmium telluride 98
- of mercury cadmium telluride 610
- of mercury(II) iodide 9
- of III–V compounds 171

Monte Carlo simulation
- of molecular beam epitaxy growth 220

Morphological stability
- of gallium arsenide 482
- of gold surface 266
- of silicon 293
- of steps 164
- of III–V compounds 171

Nonlinear optics, crystals for
- vanadyl phthalocyanine 649

Organic molecules 641, 645

Organic photoreceptor (DTPP) 636

Phase diagrams
- of indium/gallium/arsenic/phosphorus 310
- of mercury(II) iodide 15

Phosphorus
- organic 544

Precursor
- for aluminum 503
- for aluminum gallium arsenide 515, 521
- - doping of 399
- for aluminum nitride 503
- for calcium sulphide 599
- for gallium arsenide 521
- for indium phosphide 511
- for iron disilicide 444
- for zinc oxide 503

Purification of materials
- of arsenic (organic) precursor 521

Pyrite 271, 630

Quantum wells, see Device characterization

Selenium
- organic 580

Silicon 193, 293
- carbide 37, 214
- germanium 119

Silver 198

Solar cells, see Device characterization

Solution growth technique
- by electrodeposition
- - of cadmium telluride 256
- by flux method
- - of bismuth strontium calcium cuprate 659

Stoichiometry
- of mercury(II) iodide 15

Superconductivity materials, high T_c
- film
- - of BSCCO 659
- - of YBCO 655

Superlattices, multilayers
- of III–V compounds 389, 495

Surface structure
- of cadmium sulphide 408
- of indium arsenide 363, 374
- of iron disilicide 444
- of silicon 293

Thin film growth, epitaxy
- by atomic layer epitaxy
- - of gallium arsenide 239, 467
- by chemical beam epitaxy
- - of aluminum gallium arsenide 399
- - of gallium arsenide 394
- - of iron disilicide 444
- by hot wall epitaxy
- - of cadmium sulphoselenide 414
- by liquid phase electroepitaxy
- - of aluminum gallium arsenide 283
- - of III–V compounds 277
- by liquid phase epitaxy
- - of aluminum gallium arsenide 299
- - of bismuth strontium calcium cuprate 659
- - of gallium antimonide 319
- - of gallium arsenide 305
- - of gallium indium arsenide phosphide 287, 310
- - of indium gallium arsenide 153
- - of indium phosphide 314
- - of silicon 293
- - theory of 287
- by magnetron sputtering
- - of yttrium barium cuprate 655
- by metalorganic molecular beam epitaxy
- - of zinc telluride 587
- by molecular beam epitaxy
- - of aluminum arsenide 344
- - of aluminum gallium arsenide 384
- - of cadmium sulphide 408
- - of cadmium telluride 433
- - of gallium antimonide 349
- - of gallium arsenide 177, 326, 334, 344, 354, 359, 379, 389
- - of gallium selenide 439
- - of indium arsenide 363, 368, 374
- - of indium gallium aluminum arsenide 159
- - of indium selenide 439
- - of lead telluride 449
- - of mercury zinc selenide 427
- - of three (group) nitrides 340
- - of zinc magnesium selenide 418
- - of zinc manganese selenide 422
- - of zinc selenide 80, 422
- - of zinc sulphide 404
- - of zinc telluride 418
- - theory of 177, 220, 326, 449
- by vapor phase epitaxy
- - through chemical vapor deposition
- - - of gallium arsenide 246
- - - of mercury cadmium telluride 610
- - - of silicon carbide 37
- - - of silicon–germanium 119
- - through evaporation and condensation
- - - of copper indium diselenide 233
- - - of copper indium ditelluride 251
- - - of gold 266
- - - of indium nitride 262
- - - of organic molecules 641, 645, 649
- - - of organic photoreceptor (DTPP) 636
- - - theory of 198
- - through metalorganic chemical vapor deposition
- - - of aluminum 503
- - - of aluminum gallium arsenide 515, 521, 527, 564
- - - of aluminum gallium nitride 455
- - - of aluminum indium nitride 462
- - - of aluminum nitride 503
- - - of calcium sulphide 599
- - - of gallium antimonide 495
- - - of gallium arsenide 183, 379, 482, 521, 527, 564
- - - of gallium indium arsenide 489
- - - of gallium indium nitride 455
- - - of gallium indium phosphide 558
- - - of gallium nitride 455
- - - of gallium phosphide 554
- - - of indium arsenide 148, 495
- - - of indium gallium arsenide 533
- - - of indium phosphide 148, 475, 511, 533, 544, 549
- - - of iron disulphide 630
- - - of lead titanate 624
- - - of mercury cadmium telluride 619
- - - of mercury manganese telluride 604
- - - of III–V compounds 538
- - - of II–VI compounds 570
- - - of zinc oxide 503
- - - of zinc selenide 580, 592
- - - theory of 183, 202, 209
- theory of 193
Three–five (III–V) compounds 171, 277, 389, 495, 538
- review of 277
Three(III)-nitrides 340
Titanium
- nitride 188
- organic 624
n-Tritriacontane 641
Two–six (II–VI) compounds
- review of 570

Urea 29

Vanadyl
- phthalocyanine 649
Vapor growth technique
- by chemical transport
- - of iron disulphide 271
- - of titanium nitride 188
- - of zinc selenide 53, 75
- by "contactless" method
- - of cadmium sulphide 59
- - of cadmium telluride 65

– by evaporation and condensation
– – of cadmium telluride 92, 98, 125, 130, 142
– – of fullerene 227
– – of lead tin telluride 69
– – of mercury(II) iodide 1, 9, 15, 23, 112
– – of silicon carbide 214
– – of urea 29
– – of zinc selenide 42, 49
– – theory of 214
– theory of 164

Yttrium
– barium cuprate 655

Zinc
– magnesium selenide 418
– manganese selenide 422
– organic 503
– oxide 503
– selenide 42, 49, 53, 75, 80, 422, 580, 592
– sulphide 404
– telluride 418, 587
